

Course Topics

Department: Computing	Program: Bachelor of Artificial Intelligence
------------------------------	---

First Year Courses

Course Code: BUST03 Course Name: Arabic Language	Credit Hours: 4
يهتم المقرر بتنمية المهارات اللغوية الأساسية للطالب كونه من متطلبات الجامعة ويتناول جملة من النشاطات الاتصالية والدروس اللغوية والإملائية والتركيبية ويحتوي على معارف ونصوص وتدريب لغوية، ويتألف من كتابين: الأول يركز على مهاراتي الاستماع والتحدث، والثاني يركز على مهاراتي القراءة والكتابة، مع احتواء كل من الكتابين على أساسيات التركيب النحوي وبعض القواعد الإملائية ويعتمد المقرر أسلوب التدريبات والتطبيقات العملية لكل طالب، بالإضافة إلى النصوص التطبيقية في CD المرفق بالكتاب مع الامتحان النصفى والنهائي.	
Course Code BUST01 Course Name Quran Recitation & Tajweed Skills	Credit Hours: 1
يعد هذا المقرر من المقررات المهمة؛ كونه متعلق بكلام الله تعالى ثم إنه من متطلبات الجامعة، وهو مقرر نظري وتطبيقي يقوم الطالب فيه بتلاوة وحفظ نصف جزء عم من سورة (الطارق-الناس)، ودراسة الآداب التي ينبغي أن يتحلى بها قارئ القرآن، وفهم وتطبيق هذه الأحكام عند قراءة القرآن الكريم، وتستخدم طريقتي الحوار والمناقشة في التدريس، ويتم تقييم الطالب من خلال تلاوته للقرآن أثناء اللقاءات التعليمية، والقيام بالتكليفات المصاحبة – الصفية واللا صفية – مع الامتحان النصفى والنهائي.	
Course Code: BUST02 Course Name: English Language (1)	Credit Hours: 4
The current course provides students with the language basics of everyday English to help them communicate in different real-life situations. The course focuses more on real life conversations and the basic grammars that will help each one in his/her major. Moreover, the course provides students with plenty of writing and speaking practices. The updates of the book allow students to be posted with the latest language uses and functions that are easy and useable in real life situations	
Course Code: BUST09 Course Name: Computer Skills	Credit Hours: 3
This course provides a student by basic skills for using computer at studying environment, library, and at home. It presents the knowledge of basic computer and information technology concepts. The course provides the knowledge needed to operate and utilize the operating system and office software package, and to use the computer for Internet access and electronic communication.	
Course Code CIT01 Course Name Mathematics	Credit Hours: 3

**Head of Department
Faculty
Walid Al-Arshi
Alsakkaf**

**Dean of
Dr. Nasr**

This course is designed to provide you with a solid foundation in the fundamentals of mathematics The topics included in Basics of Mathematics are: Fundamentals of Algebra (Powers and Roots) Arithmetic (the basic operations of addition, subtraction, multiplication, and division), Types of Functions, Algebra (the use of symbols and letters to represent numbers and solve equations), Trigonometry (the study of trigonometric ratios and relationships between side lengths and angles of triangles), Calculus (the study of rates of change and accumulation), Limits and Continuous.		
Course Code: CIT04	Course Name: Fundamentals OF Computer	Credit Hours: 3
This course will introduce: 1) fundamental electronic data processing concepts and associated terminologies. 2) the development of computers and computer application. 3) the impact of computer on society. Furthermore, peripherals of an actual computing system CPU configuration. Device interfaces. Binary number systems, and professional ethical issues in computing will be discussed.		
Course Code: CIT05	Course Name: Principles of Programming	Credit Hours: 3
This course will cover the abstract and structure of programming, problem-solving techniques and tools, flowcharts and algorithms. Abstract data types and their list, variables declarations and memory locations. Arithmetic operators, operator's precedence, equality and relational operators, cohesion and coupling. Abstract programming structure types: sequences, selection (decision making), iteration, multiple iteration, and errors types and Program structure correctness and verification, one and multi-Dimensions arrays (basics using and operations).		
Course Code: BUST05	Course Name: Islamic Culture	Credit Hours: 4
يعد مقرر الثقافة الإسلامية من أهم المقررات الدراسية وذلك للدور الذي يساهم فيه هذا المقرر في تكوين الشخصية المسلمة القادرة على قراءة ماضيها وفهم واقعها والإسهام الإيجابي في بناء المستقبل بناءً يوافق شرع الله ويلبي احتياجات العصر من غير إفراط ولا تفريط (بوساطة). ويتم أخذ هذا المقرر بطريقة الحوار والمناقشة، كما يكلف فيه الطلبة بالبحوث التي تخدم أهداف المقرر. ويتم تقييم الطلبة عن طريق المشاركة الصفية واللاصفية والأعمال التي يكلف بها الطلبة والاختبارات النصفية والنهائية.		
Course Code: BUST06	Course Name: English Language (2)	Credit Hours: 4
The current course provides students with the language basics of everyday English to help them communicate in different real-life situations. The course focuses more on real life conversations and the basic grammars that will help each one in his major. Moreover, the course provides students with plenty of writing and speaking practices. The updates of the book allow students to be posted with the latest language uses and functions that are easy and useable in real life situations.		
Course Code: BUST07	Course Name: Communication Skills	Credit Hours: 1
يهدف مهارات الاتصال إلى إلمام الطالب بالنظريات والمفاهيم الأساسية في مجال الاتصال الإنساني وتنمية المهارات الأساسية في مجال التواصل الجيد مع الذات ومع الآخرين، وتعزيز ممارستها في حياته اليومية والعملية باستخدام أساليب جديّة تعتمد على التدريب والتطوير المتنوع والفعال، بما يساهم في إنجاح حياته الخاصة والعملية على حد سواء .		
Course Code: BUST08	Course Name: Critical Thinking	Credit Hours: 1

Head of Department
Faculty
Walid Al-Arshi
Alsakkaf

Dean of
Dr. Nasr

التفكير الناقد مادة هدفها الأساسي بناء وتنمية مهارة الطلاب الذهنية في مجال التعامل مع الآراء والأفكار المقروءة أو المسموعة أو المرئية لإبداء الرأي المؤيد أو المعارض استناداً إلى المهارات الذهنية المنظمة، والمهارات المعرفية والخبرات والتجارب. يتضمن العديد من الموضوعات الرئيسية كمفهوم التفكير الناقد وفائدته العملية والتعليمية وفي الفصل الدراسي، ومعايير، ومعارفاته ومقوماته الأساسية والمساعدة، وكيفية بناء حجج مقنعة بالاستناد إلى الاستدلال الناقد، مع بيان صور المغالطات والخدع البلاغية، ثم توجت المادة بخاتمة تضمنت تطبيق مهارات التفكير على بعض الظواهر والمجالات الحيوية في الحياة، والطريقة المثلى لتدريسها تكاد تنحصر في الجانب النظري من خلال المحاضرات والمدخلات والمناقشات المستقبلية، مع تعزيز ذلك بقدر كبير من الأساليب التدريبية، كلعب بعض الأدوار، وعرض مقاطع فيديو بالصوت والصورة، وإجراء بعض المناظرات، خصص لتدريسها والتدريب على بعض مفاهيمها 17 ساعة في الفصل الدراسي الواحد، وتدرس بنظام الساعة (زمن المحاضرة ساعة واحدة).		
Course Code: BUST04	Course Name: Leadership Skills Development	Credit Hours: 1
يهدف المقرر الى تنمية بعض المهارات القيادية والادارية لدي الدارسين وتنمية فرص التميز لديهم من خلال تعريفهم بسمات الشخصية القيادية والادارية واهم طرق واساليب التحول من التبعية الي القيادة، وتعريفهم بأهم استراتيجيات التميز والتفاعل القيادي اضافة الي تنمية بعض مهارات واخلاقيات القيادة والادارة المتعلقة بالتخطيط وادارة الذات والاخرين وطرق واساليب اتخاذ القرارات الفاعلة واساليب التحفيز، ومهارات قيادة التغير، واخلاقيات الادارة والقيادة.		
Course Code: BUST04	Course Name: Leadership Skills Development	Credit Hours: 1
يهدف المقرر الى تنمية بعض المهارات القيادية والادارية لدي الدارسين وتنمية فرص التميز لديهم من خلال تعريفهم بسمات الشخصية القيادية والادارية واهم طرق واساليب التحول من التبعية الي القيادة، وتعريفهم بأهم استراتيجيات التميز والتفاعل القيادي اضافة الي تنمية بعض مهارات واخلاقيات القيادة والادارة المتعلقة بالتخطيط وادارة الذات والاخرين وطرق واساليب اتخاذ القرارات الفاعلة واساليب التحفيز، ومهارات قيادة التغير، واخلاقيات الادارة والقيادة.		
Course Code: CIT02	Course Name: Calculus	Credit Hours: 3
This course is a semester course that includes the study of Derivatives and Integration. The topics included in derivatives are: Fundamentals of derivatives of Standard Functions, Successive Differentiation, Expansions of Functions, Indeterminate Forms and Applications of Differentiation. Topics included in integration are: Indefinite Integrals, Special Integration Techniques (Substitution, Parts and Partial fractions), Definite Integrals, and Applications on Definite integrals.		
Course Code: CIT06	Course Name: Computer Programming	Credit Hours: 3
This course will cover the rest of structure programming concepts and advance topics such as arrays, functions, pointers, strings, structures, files, and introduction to object-oriented programming. The prerequisite of this course is Principles of Programming.		
Course Code: CS201	Course Name: Discrete Structures	Credit Hours: 3
This is an introductory course in discrete mathematics. The goal of this course is to introduce students to ideas and techniques from discrete mathematics that are widely used in science and engineering. This course teaches the students techniques in how to think logically and mathematically and apply these techniques in solving problems. To achieve this goal, students will learn logic and proof, sets, functions, as well as algorithms and mathematical reasoning. Key topics involving relations, graphs, trees, and formal languages and		

**Head of Department
Faculty
Walid Al-Arshi
Alsakkaf**

**Dean of
Dr. Nasr**

computability are covered in this course.

Second Year Courses

Head of Department
Faculty
Walid Al-Arshi
Alsakkaf

Dean of
Dr. Nasr

Course Code: CIT10 Course Name: Data Structures and Algorithms	Credit Hours: 3
This course focuses on the design and implementation of computer programs in a high-level language, with emphasis on proper design principles and advanced programming concepts, including dynamic data structures and recursion. Efficient design, implementation and debugging techniques are stressed. Basic concepts of data structures such as strings, lists, arrays, stacks, queues, trees, graphs and analysis and design of efficient algorithms for searching, sorting and merging are examined	
Course Code: CIT09 Course Name: Introduction to Databases	Credit Hours: 3
This course covers the fundamental concepts of database systems. Topics include data models (ER, relational, and others); query languages (relational algebra, SQL, and others); implementation techniques of database management systems (index structures, concurrency control, recovery, and query processing); management of semi structured and complex data; distributed and NoSQL databases.	
Course Code: CIT03 Course Name: Probability and Statistics	Credit Hours: 3
This course in statistics will provide students with the knowledge of how to display data, how to calculate central tendency and scattering measurement. The course presents an introduction to probability, an explanation of the concept of random variables and the probability distributions (discrete and continuous), and kinds of correlation and regression. It also explains how to use SPSS to deal with statistical subjects.	
Course Code: CAI301 Course Name: Functional Logic Programming	Credit Hours: 3
This course provides an introduction to both functional programming and logic programming paradigms. It is designed to encourage declarative and non-procedural thinking. Most of the attention is given to functional programming. Students will learn to specify computations in a way that lets the computer determine the best method to compute the result. In addition, it helps students to look at problems from different viewpoints. The course covers fundamental concepts of functional and logic programming.	
Course Code: CIT11 Course Name: Principles of Operating Systems	Credit Hours: 3
Introduction to the fundamental principles of operating system design. The concepts and algorithms covered in the course are based on those used in both commercial and open-source operating systems. We present a large number of examples that pertain to the most popular and the most innovative operating systems. We also assign some simple coding labs to help students understand important knowledge and representative algorithms used in operating systems, such as CPU scheduling, synchronization and virtual memory.	
Course Code: CIT07 Course Name: Object-Oriented Programming	Credit Hours: 3
This course let students practice writing programs for Object Oriented programming (OOP) using Java Programming language. It offers students opportunity to learn how to solve problems and build applications using object-oriented techniques. It includes an introduction to object-oriented design, history and advantages of object-oriented design, introduction to object-oriented programming concepts, classes, objects, data encapsulation, constructors, access modifiers, const vs non-const	

Head of Department
Faculty
Walid Al-Arshi
Alsakkaf

Dean of
Dr. Nasr

functions, static data members & functions, function overloading, composition, aggregation, inheritance, polymorphism, abstract classes and interfaces, and exception handling.		
Course Code: CS401	Course Name: Introduction to Artificial Intelligence	Credit Hours: 3
The goal of Artificial Intelligence is to build software systems that behave "intelligently". By this, we mean that the computer systems "do the right thing" in complex environments--that they act optimally given the limited information and computational resources available. This course provides an introduction to artificial intelligence by covering the following topics: An overview of Artificial Intelligence (AI), Artificial intelligence as representation and search, Knowledge representation and reasoning, Machine learning techniques, Hybrid intelligent techniques and maintenance of intelligent systems.		
Course Code: CIT08	Course Name: Introduction to Web Design	Credit Hours: 3
Discover the basics of web design using HTML and CSS. No prior knowledge of HTML or web design is required. Throughout the course you will get the info you need to plan and design effective web pages. Come away knowing how to implement web pages by writing HTML and CSS code. And discover ways to enhance web pages with the use of page layout techniques, text formatting, graphics, and images		
Course Code: CS302	Course Name: Introduction to Computer Network	Credit Hours: 3
Technologies related to data communication and networking may be the fastest growing in our culture today. People use the Internet more and more every day. They use the Internet for research, shopping, airline reservations, checking the latest news and weather, and so on. This course is given to provide students with fundamentals of computer networking, the OSI model, and the TCP/IP model. A discussion of the physical layer of the Internet model and the transmission media is given. Students will learn switching techniques which can be used in several layers. A discussion of the data-link layer and network layer of the Internet model will also be given.		
Course Code: CS402	Course Name: Software Engineering	Credit Hours: 3
The Software Engineering course provides an in-depth exploration of the principles, methodologies, and practices involved in software development. This course covers the entire software development life cycle (SDLC), including requirements gathering, design, implementation, testing, deployment, and maintenance. Students will engage in hands-on projects that utilize modern development tools and techniques, fostering collaboration and problem-solving skills. By the end of the course, participants will have the knowledge and experience necessary to design, develop, and manage software projects effectively.		
Course Code: CS301	Course Name: Design and Analysis of Algorithms	Credit Hours: 3
The course covers classical techniques and paradigms used in the design and analysis of algorithms. Some of the covered techniques are induction and recursion, divide and conquer, dynamic programming, and greedy approach. Techniques like backtracking and randomization are also introduced to deal with NP-Complete problems. Students will be able to practice their skills on many well-known algorithms and data structures designed to solve practical problems.		
Course Code: CS403	Course Name: Theory of Computation& Automata	Credit Hours: 3
This course introduces the students to finite deterministic and non-deterministic automata, regular		

Head of Department
Faculty
Walid Al-Arshi
Alsakkaf

Dean of
Dr. Nasr

expressions, finite-state systems, and their definitions. Algorithms to convert NDA to DFA. Finite automata with ϵ moves. Regular expressions, finite automata with output. Applications of finite automata: hardware (sequential circuits), software (lexical analysis). Turing Machines, model, construction techniques. Compatible languages of Turing Machines, modifications of Turing Machines, Two-way infinite tape, Multi-tape Turing Machine. Complexity theory.

Third Year Courses

Course Code: CAI501 Course Name: Introduction to Machine Learning	Credit Hours: 3
This course covers the fundamental theoretical topics in machine learning. Student will begin by learning about concept of machine learning, applications of machine learning, key elements of machine learning, supervised vs. unsupervised learning, statistical learning: Bayesian method, the naive Bayes classifier. This course teaches students how to create machine learning challenges for a variety of applications. To have a better understanding of machine learning methods that are focused on classifications and grouping. To become familiar with a variety of publicly available machine learning software libraries and data sets.	
Course Code: CAI502 Course Name: Advance Programming	Credit Hours: 3
This course delves into advanced Python programming, covering metaprogramming, developer tools, database interaction, and network programming. It explores multiprocessing, data serialization, web development with Django and Flask, and data analysis using SciPy, Pandas, and Scikit-learn. The course also provides insights into CPython internals and type hinting.	
Course Code: CAI503 Course Name: Modeling and Simulation	Credit Hours: 2
This course explores the fundamentals of modeling and simulation with a focus on applications in artificial intelligence (AI) and computer science. This course will familiarize students with general knowledge about the role of modelling in artificial intelligence which help in the model	

**Head of Department
Faculty
Walid Al-Arshi
Alsakkaf**

**Dean of
Dr. Nasr**

development & maintenance cycle . Students will learn to develop computational models that mimic real-world systems		
Course Code: CAI505	Course Name: Artificial Neural Networks	Credit Hours: 3
This course offers a comprehensive exploration of the theory of neural networks in the realm of artificial neural networks. The course delves into both feedforward and recurrent architectures. By bridging theory and application, this course equips students with the knowledge and skills to effectively leverage neural networks for addressing real-world challenges in machine learning, making it an essential component for those seeking proficiency in this dynamic and evolving field.		
Course Code: CAI606	Course Name: Computer Vision	Credit Hours: 3
Computer vision is one of the major research fields of artificial intelligence, with many applications in image understanding and processing, medical care, autonomous driving, and robotics. We offer this undergraduate course to provide a comprehensive introduction to the basic concepts of computer vision and its broad applications. In this course, we will cover both the traditional non-learning methods (e.g. classic descriptors, Multiview geometry) and deep learning based methods from a modern perspective, where 3D vision serves as a natural bridge. The objective of this course is thus to consolidate the fundamentals, depict a full picture of this field, and get the students prepared for doing frontier research in computer vision. During this course, students will learn to build a basic vision system and implement and train their own neural networks to process and analyze 2D and 3D visual data.		
Course Code: CAI601	Course Name: Introduction to Deep Learning	Credit Hours: 3
This course covers the fundamental theoretical topics in deep learning. Student will begin by learning about how experts think about deep learning, when it is appropriate to use deep learning, and how to apply the skill. Student will then learn the foundational algorithms underpinning modern deep learning: gradient descent and backpropagation. Once those foundations are established, explore design constructs of neural networks and the impact of these design decisions. Finally, the course explores how neural network training can be optimized for accuracy and robustness using training techniques like early stopping, dropout, regularization, and momentum.		
Course Code: CAI602	Course Name: Introduction to Natural Language Processing	Credit Hours: 3
Natural Language Processing addresses fundamental questions at the intersection of human languages and computer science. How can computers acquire, comprehend and produce English? How can computational methods give us insight into observed human language phenomena? In this interdisciplinary introductory course, you will learn how computers can do useful things with human languages, such as translation between different languages, filter junk email, and find the main topics in the day's news. The intent of the course is to present a fairly broad graduate-level introduction to Natural Language Processing (NLP, a.k.a. computational linguistics), the study of computing systems that can process, understand, or communicate in human language. The primary focus of the course will be on understanding various NLP tasks as listed on the course syllabus,		

**Head of Department
Faculty
Walid Al-Arshi
Alsakkaf**

**Dean of
Dr. Nasr**

algorithms for effectively solving these problems, and methods for evaluating their performance		
Course Code: CAI603	Course Name: Machine Learning Algorithms	Credit Hours: 3
This course teaches students how to create machine learning challenges for a variety of applications. To have a better understanding of machine learning algorithms and methods that are focused on classifications and grouping. To become familiar with a variety of publicly available machine learning software libraries and data sets. To create a machine learning based system that can solve a variety of real-world challenges. To determine how a machine learning algorithm's selection affects a system's accuracy.		
Course Code: CAI604	Course Name: Elective (1)	Credit Hours: 3
Course Code: CIT14	Course Name: Field Training	Credit Hours: 2
This course offers instruction on using computer tools and their applications in a variety of industries. training in institutions in the public or private sectors, under the direction of department faculty. that The students' acquisition of information and experience occurs through field training, which is supervised by real-world situations. exercising in the training program's academic component. Students benefit from field experience, which also contributes to on-the-job training. .There should be opportunities for non-learning during field training. present in classrooms		

Fourth Year Courses

Course Code: CAI701	Course Name: Data Mining and Big Data Analytics	Credit Hours: 3
This course introduces students to the fundamental concepts, tools, and techniques used in big data analytics. Students will learn how to collect, store, process, and analyze large datasets using distributed computing frameworks like Hadoop. The course covers data preprocessing, exploratory data analysis, machine learning algorithms for big data, and visualization techniques to communicate insights effectively.		
Course Code: CAI702	Course Name: Unsupervised and Reinforcement Learning	Credit Hours: 3
This course is intended for students interested in artificial intelligence. Reinforcement learning (RL) is an area of machine learning where an agent learns how to behave in an environment by performing actions and assessing the results. Reinforcement learning is how Google DeepMind created the AlphaGo system that beat a high-ranking Go player and how Alpha Star become the first artificially intelligent system to defeat a top professional player in StarCraft II. We will study the fundamentals and practical applications of reinforcement learning and will cover the latest methods used to create agents that can solve a variety of complex tasks, with applications ranging from gaming to finance to robotics. The course is comprised of assignments, short weekly quizzes, a final		

**Head of Department
Faculty
Walid Al-Arshi
Alsakkaf**

**Dean of
Dr. Nasr**

project and a final exam.		
Course Code: UST10	Course Name: Research Methodology	Credit Hours: 3
يعد هذا المقرر من أهم المقررات الدراسية كونه يمكن الطالب الجامعي من المهارات التي تساعد على إنجاز بحث التخرج وهو يعمل على إكسابه مجموعه من المعلومات والمعارف حول العلم والمعرفة والبحث العلمي ومناهجه وينمي الاتجاهات الإيجابية لدى المتعلم تجاه البحث العلمي ويتحقق ذلك من خلال مجموعه من الأنشطة الفاعلة (طرائق وأساليب تدريس، ووسائل) كطريقة الحوار والمناقشة والتعلم الذاتي والبحث والتطبيقات مع استخدام الباوربوينت عن العرض وتقييم الطالب من خلال المشاركة الصفية والتكليفات المصاحبة ، الصفية واللاصفية ، والاختبار النصفي والنهائي		
Course Code: CAI703	Course Name: Elective (2)	Credit Hours: 3
Course Code: CIT12	Course Name: Graduation Project I	Credit Hours: 3
This course focuses on the graduation project design stages. It provides students with the opportunity to engage in an activity that will allow them to demonstrate their ability to apply the knowledge and skills they have gained throughout their years in the educational system. At the end of this course, students must deliver a project with a major component that has passed through the design, analysis, implementation, testing, and evaluation stages.		
Course Code: CAI801	Course Name: Introduction to Robotics	Credit Hours: 3
The course will cover the following topics: types and classifications of robots, degrees of freedom, robot dynamics and kinematics, robot sensors and vision applications, robotic actuator systems, basic control systems for robots, embedded systems and artificial intelligence in robotic systems. Arduino kits, servo motors and different sensors are used to design DoF manipulators		
Course Code: CAI802	Course Name: Ethics in Artificial Intelligence	Credit Hours: 3
This course is a survey of ethical issues related to artificial intelligence and data collection, such as moral rights for AI, algorithmic bias, data privacy, the use of AI in war, and more. Over the course of the semester, we will draw on philosophical concepts like the notions of rights, social justice, autonomy, and moral agency and apply them to ethical issues related to AI and data. The course will be divided topically, and for each topic, we will analyze and compare multiple philosophical perspectives on the relevant moral, social, and political issues		
Course Code: CAI803	Course Name: Elective (3)	Credit Hours: 3
Course Code: CIT13	Course Name: Graduation Project II	Credit Hours: 3
This course focuses on the graduation project design stages. It provides students with the opportunity to engage in an activity that will allow them to demonstrate their ability to apply the knowledge and skills they have gained throughout their years in the educational system. At the end of this course, students must deliver a project with a major component that has passed through the design, analysis, implementation, testing, and evaluation stages.
